The **GNSS, Cellular/LTE, WIFI, ISM** antennas with Screw, Adhesive, Magnetic Mount are high-performance antennas ideal for powerful global connections on the move. These antennas perform by offering GNSS, LTE, WIFI - Bluetooth standards, designed with an omni-directional radiation pattern. For external applications, the production material used is ABS / UV stable, protecting the antenna from temperatures between -40°C and +80°C.

Durable ABS housing, with thread and nut mounting available they are resistant to vandalism and direct attack.

The **IP67** waterproof robust plastic body makes it extremely light, economical for shipping and minimum weight impact on vehicles. With a shark fin design, anti-rotation mechanism and ground plane independence, this screw mount antenna is easy to install with maximum durability.

The cables on the antennas are available with SMA-Male standard connectors, 300cm standard cable length and are fully customizable by offering additional connector types, cable lengths and cable types.
